

## PHOTO LUMINESCENT PLASTIC MASTER BATCH PELLETS

These Plastic Master Batch Pellets are used mainly for the production of glow in the dark, plastic products like plastic toys, casings, credit cards...

Glow in the Dark Plastic Pellets/Master batches are specially manufactured for Plastic Injection Molding purposes. These Pellets are produced by mixing different types of plastic materials with glow pigment.

The following types of Ready Made Plastic Pellets are available  
**PP, PE, AS, ABS, PC and PS**

You could still manufacture plastic products that glow by mixing the glow powder directly into plastic and molding but anyone who has tried it would know that it is easier said than done. Which is why we created plastic pellets, which already contain the glow powder. All you have to do is to melt it and mold it into your required shape.

Our products are coded according to the plastic type and grade.

Let's look at PP7D-50 for example:

*PP refers to the plastic type.*

*7 refers to the Powder Grade. The higher, the brighter the glow.*

*D refers to the particle size used.*

*- 50 refers to the percentage of powder added. In this case is 50%.*

We can also produce Luminous Plastic Master Batch Pellets according to your specifications but a minimum order of at least 50kg is required. Send in your enquiries for special requirements to [orders@glo-net.com](mailto:orders@glo-net.com)

### LUMINESCENT PLASTIC MASTER BATCH PELLETS
